

Report Of
ADH ID GENERATION SOFTWARE

By ADH Enterprises

Submitted To
School of Computer Science and Engineering
IILM University, Greater Noida, U.P.

In partial fulfilment of the requirement of degree of
B.Tech CSE

By
Roll Number of Student: 25SCS100300450
Name of Student: Modassir Husain
Year / Semester: 2nd Year, 3rd Semester
Batch: 2026–27

CANDIDATE'S DECLARATION

I, **Modassir Husain**, hereby declare that the internship report titled “**ADH ID Generation Software**” has been completed by me as a part of my internship and in partial fulfilment of the requirements for the award of the degree of Bachelor of Technology in Computer Science and Engineering.

I am currently pursuing B.Tech in Computer Science and Engineering. During my internship, I worked with the team on the planning and development of the **ADH ID Generation Software**.

My contribution mainly included working on the **front-end design and user-facing parts of the product**, helping with the layout and structure of different sections, organizing the interface and workflow, and contributing to the improvement of the overall usability and presentation of the application.

The information presented in this report is based on my work, learning, and experience during the internship. I confirm that this report has been prepared for academic submission and has not been submitted to any other institution for the award of any degree or diploma.

Signature : *Modassir Husain*

Student Name : Modassir Husain

Roll No. : 25SCS1003004509

ACKNOWLEDGEMENT

I would like to sincerely thank everyone who supported and guided me during my internship. This internship gave me an opportunity to experience how a software product is planned, designed, developed, and refined in a practical environment.

Working on the **ADH ID Generation Software** helped me understand that creating a software product is not only about development, but also about understanding how users will interact with the product, planning the layout, organizing the interface, and improving the overall user experience.

I am especially thankful to my mentors and team members for involving me in the product discussions and development process. Their guidance helped me contribute to the front-end design, understand the layout and workflow of the application, organize different interface sections, and improve the overall presentation and usability of the product.

I am also grateful to the **School of Computer Science and Engineering, IILM University**, for providing me with the opportunity to undertake this internship and gain practical experience beyond the classroom.

Finally, I would like to thank my parents, friends, and everyone who encouraged and supported me throughout the internship.

Student Name : Modassir Husain

Roll No. : 25SCS1003004509

INTERNSHIP COMPLETION CERTIFICATE

ADH ENTERPRISES

INTERNSHIP COMPLETION CERTIFICATE

THIS IS TO CERTIFY THAT

Modassir Husain

has successfully completed his internship at **ADH Enterprises**
from **21rd May 2026 to 21rd July 2026**.

During the internship period, he was found to be sincere,
hardworking and dedicated towards his responsibilities.

We appreciate his contribution and wish him all the
best for his future endeavors.

Authorised Signatory

Certificate Holder: Modassir Husain
Organization: ADH Enterprises
Role: Front-End Designer Intern
Internship Project: ADH ID Generation Software

PROJECT DESCRIPTION

4.1 INTRODUCTION

During my internship, I got the opportunity to work on a software product called **ADH ID Generation Software**. The main idea behind the product was to make the process of managing information and generating identification cards more organized and convenient.

My involvement was mainly related to the **front-end design and user-facing side of the product**. I participated in discussions about how different sections of the application should look and work, how information should be presented, and how users should move through the different parts of the application.

I contributed to the layout and interface of the product and worked on organizing different elements of the user interface. This included understanding the requirements, planning the placement of different sections, and helping refine the interface according to the required workflow.

The project helped me understand how the design of an interface can affect the usability of a software product and how front-end design needs to work together with the overall product structure.

4.2 ORGANIZATION PROFILE

ADH Enterprises is an organization working in the areas of printing, designing, and digital solutions. During my internship, I got the opportunity to work with the team on the **ADH ID Generation Software**.

The internship gave me practical exposure to a real working environment where ideas were discussed, planned, designed, developed, and refined.

Being involved in the front-end side of the product was particularly useful because I was able to understand how requirements are converted into layouts and user interfaces and how different sections of a software product are connected from the user's point of view.

4.3 PROBLEM STATEMENT

Creating and managing ID cards can become difficult when a large number of records have to be handled. Information needs to be organized properly, the layout needs to remain consistent, and changes or corrections may have to be managed before the final ID cards are prepared.

When such work is handled manually, it can require considerable time and may also result in repeated work or inconsistencies.

The **ADH ID Generation Software** was planned to provide a more organized way of handling this process. The main idea was to bring the required activities into a single structured product and make the overall workflow easier to manage.

From the front-end perspective, an important requirement was to make this workflow understandable through a **clear and simple user interface**.

4.4 PROJECT OBJECTIVES

- To develop an organized software solution for ID generation.
- To create a simple and understandable user interface.
- To plan suitable layouts for different parts of the application.
- To organize information clearly within the interface.
- To establish a clear and logical working flow for users.
- To maintain consistency across different sections of the product.
- To make the interface convenient and easy to understand.
- To provide a front-end structure that can be improved in the future.

My personal contribution was mainly focused on **front-end design, interface layout, user workflow, visual organization, and improving the usability of the product**.

4.5 SCOPE OF THE PROJECT

The scope of the **ADH ID Generation Software** is to provide a structured way of managing the ID generation process.

The project mainly covers:

- Providing a user-friendly front-end interface.
- Designing and organizing the layout of the application.
- Planning how different sections should be presented.
- Organizing the workflow through which users interact with the product.
- Presenting information in a clear and understandable manner.
- Maintaining consistency across different interface sections.
- Improving the usability and overall presentation of the product.
- Providing a base that can be extended according to future requirements.

The product can be improved further as new requirements and use cases are identified.

4.6 TECHNOLOGIES AND TOOLS USED

The project involved different software development tools and technologies. My work was mainly connected with the practical areas of **front-end design, interface development, layout planning, and user experience**.

The major areas in which I gained experience were:

- **Front-End Design** – working on the user-facing parts of the product.
- **Interface Layout** – helping decide how different sections and elements should be arranged.
- **User Workflow** – understanding how users should move through different parts of the application.
- **Visual Organization** – maintaining proper structure, spacing, alignment, and presentation.
- **Development and Testing** – working with the team while different parts of the interface were developed and refined.

The internship helped me understand how front-end design and development contribute to the overall usability of a software product.

4.7 SYSTEM ARCHITECTURE

The overall product structure was planned by dividing the work into connected areas. At a simple level, the product can be understood through the following flow:

My contribution was mainly in the **layout and user interface** part of the product. I helped in understanding how different sections should be presented, how users should interact with the application, and how the interface could remain clear and easy to use.

The purpose of this structure was to keep the product understandable and organized while allowing its different parts to work together.

4.8 METHODOLOGY

The product was developed gradually, starting from the basic idea and moving towards planning, layout, front-end development, and refinement. My involvement can broadly be described through the following stages:

1. Requirement Understanding

The initial stage involved understanding the purpose of the product and identifying the requirements of the application. I participated in discussions to understand what users would need to see and interact with.

2. Interface Planning

After understanding the requirements, I contributed to discussions about how different screens and sections of the product should be organized.

This included thinking about the placement of information, buttons, forms, navigation elements, and other user-facing components.

3. Layout and Workflow

I helped with the planning of the layout and working flow of the product. This included discussing how different sections should be arranged and how users should move through the application.

The main focus was to keep the workflow simple, organized, and easy to understand.

4. Front-End Contribution

I contributed to the front-end side of the product by working on user-facing portions of the application.

My work involved helping implement and refine the planned layouts and interface structure. This gave me practical understanding of how an interface design is converted into an actual working product.

5. Interface Refinement and Testing

As the product developed, different interface sections were reviewed and refined. I worked with the team to identify areas where the layout, presentation, or workflow could be improved.

This helped me understand the importance of feedback and testing in creating a better user interface.

4.9 EXPECTED OUTCOMES

The main expected outcome of the project was to create an organized and easy-to-use software product for managing the ID generation process. The product was intended to make the overall process more structured and reduce unnecessary manual effort.

From my internship perspective, the project helped me gain practical understanding in the following areas:

- Understanding how a software product is initially planned.
- Understanding how user requirements influence interface design.
- Planning the basic layout of a product before development.
- Understanding how layout and workflow affect the user experience.
- Contributing to front-end development.
- Organizing information in a clear and understandable manner.
- Understanding the importance of visual consistency.
- Working collaboratively while developing a real software product.
- Learning how feedback can be used to improve an interface.

One of the most important things I learned was that **a good interface should not only look organized but should also make the user's work easier**. Proper layout, clear navigation, understandable information, and consistent design are important parts of a successful software product.

4.10 CERTIFICATES OF COMPLETION AND OTHER COMMUNICATION

The Internship Completion Certificate issued by **ADH Enterprises** is attached with this report.

Any relevant internship-related communication, design material, screenshots, or supporting documents may also be attached in this section, if required.

BIBLIOGRAPHY / REFERENCES

1. Documentation and learning resources referred to during the development of the **ADH ID Generation Software**.
2. Internal project discussions and guidance received during the internship.
3. Development references consulted during front-end development and interface design.
4. Learning resources related to front-end design, user interface development, and responsive layouts.
